## Best Management for Hybrid Clouds

The vRealize Suite Cloud Management Platform (CMP) is the management control plane for VMware's Software-Defined Data Center (SDDC) including multi-vendor hybrid cloud resources.

The integration across vRealize Suite management domains means that VMware can provide a holistic and integrated approach to the management of Hybrid cloud environments. For example, within VMware's vRealize Suite, operational capabilities that highlight resource inefficiencies within the infrastructure are connected with automation capabilities that can manage the reclamation of unused resources.

VMware's CMP technologies are also natively integrated with other VMware SDDC solutions. For instance, VMware NSX constructs such as networking and firewalling are natively available for inclusion in service templates created using VMware's CMP. This means that virtual networks, load balancers, and firewalls can be instantiated on demand when provisioning resources.

## What does vRealize Suite Deliver?

VMware's vRealize Suite delivers the industry's most complete solution for building and managing multi-vendor hybrid cloud environments. vRealize Suite helps companies deploy the following operational management solutions:

### • Intelligent Operations

Proactively address health, performance and capacity management of IT services across heterogeneous and hybrid cloud environments in order to improve efficiency, performance and availability.

### • IT Automation to IaaS

Automate the delivery and ongoing management of IT infrastructure in order to reduce the time it takes to respond to requests for IT resources and to improve the ongoing management of provisioned resources.

### • DevOps-Ready IT

Build a cloud solution for development teams that can deliver a complete application stack; support developer choice in the form of both API and GUI access to resources; and provision resources across a hybrid cloud. Extend the solution scope by addressing continuous delivery to further speed up application delivery.

vRealize Suite also allows organizations addressing the above use cases to understand the cost of infrastructure options and the consumption of resources by end users in order to maximize capital spending.
